PROCEEDINGS
of the

LOS ALAMOS CONFERENCE ON OPTICS '79

SPIE Vol. 190

D. H. Liebenberg
Editor

S. Stotlar
Conference Chairman

Organized by Local Members of the Following Societies:

Optical Society of America
Laser Institute of America
Quantum Electronics and Applications Society of IEEE
Society of Photo-Optical Instrumentation Engineers

Sponsored by:

Los Alamos
Scientific Laboratory

ISBN 0-89252-218-6

LOS ALAMOS CONFERENCE ON OPTICS '79

Volume 190

Contents

Organizing Committee ix

190-01 **Introduction to the Proceedings of the Los Alamos Conference on Optics '79** x
D. H. Liebenberg, Univ. of Calif., Los Alamos Scientific Laboratory

Conference Overview xii

SECTION 1. OPTICAL COMPONENTS 1

190-02 **Lens design that simultaneously optimizes image spots, optical path difference (OPD), diffraction modulation transfer function (DMTF), and Seidel aberrations** 2
Berlyn Brixner, Univ. of California, Los Alamos Scientific Laboratory

190-17 **Designing holographic optical elements** 5
Chungte W. Chen, Optical Sciences Center, Univ. of Arizona;
William C. Sweatt, Los Alamos Scientific Laboratory

190-04 **Aplanatic waxicons** 10
Gerald N. Minerbo, Los Alamos Scientific Laboratory

190-05 **Laser beam expander—a new design** 15
David R. Shafer, The Perkin-Elmer Corporation

190-106 **Dimensional analysis of the paraxial equations of optics** 21
Roger Carmichael, Flexion Corporation

190-08 **Vacuum predisperser for a large plane-grating spectrograph** 24
R. Engleman, Jr., B. A. Palmer, D. W. Steinhaus, Univ. of California,
Los Alamos Scientific Laboratory

190-25 **Digital data acquisition/analysis system for infrared spectrophotometry** 30
Charles A. Burke, Daniel S. Coolidge, Valtec Corporation

190-13 **Interference problems in a coherent aberration sensor** 37
Joseph M. Geary, David F. Holmes, Air Force Weapons Laboratory;
Michael Harris, Perkin-Elmer Corporation

190-19 **Improved dark-field-like surface inspection technique using total internal reflection** 44
P. A. Temple, Naval Weapons Center

190-21 **Scatterplate interferometry: a diffraction theory** 52
L. A. Johnson, John Hayes, Optical Sciences Center, Univ. of Arizona

190-22 **Scattered-light measurements of optical surfaces** 58
R. N. Smartt, Sacramento Peak Observatory

190-24 **Synchronous detection technique for determining Brewster's angle** 67
Richard J. Harris, John A. Detrio, Univ. of Dayton Research Institute

190-11 **Fabrication of precision optical elements using phase measuring interferometric tests** 71
Ronald T. Grosso, Perkin-Elmer Corporation

190-12 **Removal of optical coatings without polishing** 73
Helen Gourley, ILC Technology, Inc.

190-14 **Multilayer high reflective coating designs achieving broadband 90° phase change** 81
W. H. Southwell, Rockwell International Corporation, Rocketdyne Division

190-15 **Mechanical stress compensation in multilayer dichroic mirrors for the 16 μm spectral region** 89
Philip Baumeister, James Pritts, David Lees, Univ. of Rochester;
David F. Edwards, Los Alamos Scientific Laboratory

190-23 **I³ sensor wavefront performance** 91
J. K. Bowker, J. Feinleib, S. Landon, L. E. Schmutz, S. J. Tubbs,
Adaptive Optics Associates, Inc.

190-06 **10.6 micrometer interferometric testing of infrared optical components and aspherics** 99
Osuk Kwon, J. C. Wyant, C. R. Hayslett, Optical Sciences Center, Univ. of Arizona

190-32 **Single-point diamond-turned mirror performance before and after polishing** 103
Jon E. Sollid, Univ. of California, Los Alamos Scientific Laboratory

190-42 **Polytran® NaCl windows for LASL Antares CO_2 laser system** 106
V. E. Straughan, Harshaw Chemical Company

190-44 **Large laser windows from Czochralski-grown NaCl** 112
O. H. Nestor, D. A. Hammond, G. Bastien, Harshaw Chemical Company

190-43 **Optical figuring and evaluation of 18" NaCl windows** 116
E. F. Shrader, G. Bastien, Harshaw Chemical Company

190-10 **Polishing large NaCl windows on a continuous polisher** 120
Ray Williamson, Univ. of California, Los Alamos Scientific Laboratory

190-01 **Optical standards and the American Society for Testing and Materials (ASTM)** 127
D. H. Liebenberg, Los Alamos Scientific Laboratory

SECTION II. OPTICS FOR LASER FUSION 157

190-46 **Optical design and analysis of carbon dioxide laser fusion systems using interferometry and fast Fourier transform techniques** 158
V. K. Viswanathan, Univ. of California, Los Alamos Scientific Laboratory

190-47 **Optical performance of the Gemini carbon dioxide laser fusion system** 165
V. K. Viswanathan, J. J. Hayden, I. Liberman, Univ. of California,
Los Alamos Scientific Laboratory

190-30 **Beam simultaneity in multi-terawatt CO_2 laser fusion systems** 172
R. L. Carlson, D. E. Casperson, J. Hanlon, J. S. Ladish, R. Quicksilver, C. Smith,
Univ. of California, Los Alamos Scientific Laboratory

190-31 **Optimization of a multicomponent gaseous saturable absorber for the Helios CO_2 laser system** 178
R. F. Haglund, Jr., D. E. Casperson, S. J. Czuchlewski, C. J. Elliott, J. C. Goldstein,
J. S. Ladish, A. V. Nowak, Univ. of California, Los Alamos Scientific Laboratory

190-26 **Helios CO_2 fusion laser alignment system** 186
J. Hanlon, M. D. Bausman, M. Caine, M. Calcote, R. L. Carlson, J. J. Hayden, I. Liberman,
J. Murphy, R. Parnell, R. Partridge, J. Reay, G. Salazar, H. Tucker, Univ. of California,
Los Alamos Scientific Laboratory

190-28 **Helios target positioning system** 191
Robert D. Day, Charles E. Cummings, John A. Hanlon, Howard E. Tucker, Richard W. Teasdale,
Los Alamos Scientific Laboratory

190-29 **Design of Helios beam diagnostics** 197
J. D. Seagrave, I. J. Bigio, S. V. Jackson, A. M. Laird, Univ. of California,
Los Alamos Scientific Laboratory

190-33 **Antares beam alignment system** 207
A. C. Saxman, T. Swann, W. C. Sweatt, Q. Appert, K. C. Jones, J. Hudgens, Univ. of California, Los Alamos Scientific Laboratory

190-35 **Mirror quality required by the Antares laser system** 218
W. C. Sweatt, Univ. of California, Los Alamos Scientific Laboratory

190-34 **Antares power amplifier optical system** 225
Chester J. Silvernail, Los Alamos Scientific Laboratory; K. C. Jones, EG&G

190-40 **LOTS analysis of optical diffraction in Antares** 232
Peter N. Wolfe, A. C. Saxman, Los Alamos Scientific Laboratory; G. Lawrence, Optical Sciences Center, Univ. of Arizona

190-41 **Applications of the laser optical train simulation (LOTS) computer code to laser fusion systems and other physical optics problems** 238
G. Lawrence, Optical Sciences Center, Univ. of Arizona; P. N. Wolfe, Los Alamos Scientific Laboratory

190-38 **Infrared Smartt interferometer as an alignment tool for carbon dioxide laser fusion systems** 243
V. K. Viswanathan, P. D. Bolen, Univ. of California, Los Alamos Scientific Laboratory

190-36 **Use of adaptive optics elements for wavefront error correction in the Gemini CO_2 laser fusion system** 251
V. K. Viswanathan, J. V. Parker, T. A. Nussmier, C. J. Swigert, W. King, A. S. Lau, K. Price, Univ. of California, Los Alamos Scientific Laboratory

190-37 **Novel deformable mirror design for possible wavefront correction in CO_2 laser fusion system** 258
S. V. Gunn, T. A. Heinz, W. D. Henderson, N. A. Massie, Rockwell International; V. K. Viswanathan, Univ. of California, Los Alamos Scientific Laboratory

190-39 **Optical measurements of lateral energy flow and plasma motion in laser-produced plasmas** 259
Robert F. Benjamin, James H. Riffle, Univ. of California, Los Alamos Scientific Laboratory

SECTION III. LASERS AND DETECTORS 261

190-48 **Spectroscopy of the CF_4 laser** 262
R. S. McDowell, C. W. Patterson, C. R. Jones, M. I. Buchwald, J. M. Telle, Univ. of California, Los Alamos Scientific Laboratory

190-49 **Efficient optically pumped CF_4 laser system** 270
John M. Telle, Roger C. Eckhardt, Michael S. Sorem, Univ. of California, Los Alamos Scientific Laboratory

190-50 **Optical pumping of the $\nu_3 + \nu_4$ band of the CF_4 molecule** 272
Martin S. Piltch, Ronald Hinsley, Roger C. Eckhardt, Los Alamos Scientific Laboratory

190-72 **Diode laser spectroscopy of Q branches at 662-666 cm^{-1} of CO_2 enriched in ^{18}O and ^{17}O** 275
Herbert Flicker, Norris G. Nereson, Univ. of California, Los Alamos Scientific Laboratory; W. S. Benedict, Univ. of Maryland

190-51 **Parametric amplification at 16 micrometers** 280
Robert G. Wenzel, George P. Arnold, Los Alamos Scientific Laboratory

190-67 **Broadly tunable picosecond infrared (IR) source** 286
A. J. Campillo, R. C. Hyer, S. L. Shapiro, Univ. of California, Los Alamos Scientific Laboratory

190-55 **Nonlinear optical properties of the perrhenate ion in KCl** 293
J. F. Figueira, R. K. Ahrenkiel, D. Dunlavy, Univ. of California, Los Alamos Scientific Laboratory

190-58 **TEM_{00} mode Ho:YLF laser** 297
N. P. Barnes, D. J. Gettemy, N. J. Levinos, J. E. Griggs, Los Alamos Scientific Laboratory

190-59 **Mini-lasers for high-repetition-rate rare gas halide oscillators** 305
Robert C. Sze, Peter B. Scott, Los Alamos Scientific Laboratory

190-60 **Unstable resonator studies for a 1-joule per pulse KrF avalanche discharge laser** 311
Samuel Reading, Robert C. Sze, Charles Tallman, Univ. of California, Los Alamos Scientific Laboratory; Russell Wallace, Charles Warner, Rocketdyne Division, Rockwell International

190-78 **Highly efficient translation of infrared laser wavelengths by microwave electro-optic modulation** 316
Gary M. Carter, Massachusetts Institute of Technology; Dennis H. Gill, Los Alamos Scientific Laboratory

190-64 **Laser pulse shaping on multiple rotational lines** 322
J. P. Hauck, J. D. McMullen, C. L. Hayes, Rockwell International

190-54 **Calculation of small signal gain coefficients in CO_2** 327
John C. Goldstein, Univ. of California, Los Alamos Scientific Laboratory

190-56 **Generation of ultrashort CO_2 pulses by free-induction decay in KCl:$KReO_4$** 332
R. K. Ahrenkiel, J. F. Figueira, D. Dunlavy, Univ. of California, Los Alamos Scientific Laboratory

190-53 **High pressure reinjection CO_2 oscillator** 338
E. J. McLellan, C. Findley, J. Roberts, Univ. of California, Los Alamos Scientific Laboratory

190-65 **Multipulse energy extraction in CO_2 laser amplifiers** 340
Howard C. Volkin, Eugene E. Stark, Jr., Los Alamos Scientific Laboratory

190-62 **New position-sensitive detector for pulsed or CW laser beam alignment** 344
R. B. Hammond, Univ. of California, Los Alamos Scientific Laboratory

190-63 **Pyroelectric detectors for subnanosecond CO_2 laser pulse measurements** 347
S. C. Stotlar, E. J. McLellan, J. Webb, A. J. Gibbs, Univ. of California, Los Alamos Scientific Laboratory

190-57 **Performance characteristics of diffused junction silicon photodiodes** 355
L. D. Major, Jr., R. W. Olmsted, R. R. Kusner, Harshaw Chemical Company

190-52 **Multi-anode microchannel arrays** 360
J. Gethyn Timothy, George H. Mount, Univ. of Colorado; Richard L. Bybee, Ball Aerospace Systems Division

190-66 **Subnanosecond detector developments at ITT** 369
Edward H. Eberhardt, ITT Electro-Optical Products Division

SECTION IV. APPLICATIONS 379

190-84 **Optical diagnostic system for observation of laser-produced shock waves** 380
Mark D. Wilke, Sidney N. Stone, Los Alamos Scientific Laboratory

190-80 **Fiber optic applications in plasma diagnostics** 388
P. B. Lyons, L. D. Looney, Los Alamos Scientific Laboratory; S. Lutz, M. A. Nelson, EG&G, Santa Barbara

190-90 **Use of fiber optics to eliminate ground loops and maintain shielding integrity on a controlled fusion experiment** 396
George Chandler, Armand Brousseau, Rodger Hall, Rita Gribble, Los Alamos Scientific Laboratory

190-71 **Characterization of low-loss multimode optical fibers for nuclear diagnostics** 401
J. W. Ogle, M. A. Nelson, T. J. Davies, S. Lutz, C.-H. Lin, K. Theobald, L. A. Franks, N. J. Norris, EG&G, Santa Barbara Operations; P. B. Lyons, Los Alamos Scientific Laboratory

190-91 **Modeling the cumulative bandwidth measured in concatenated fiber optic cables** 408
M. J. Buckler, Bell Telephone Laboratories

190-79 **Pulse propagation and dispersion in arbitrary optical fibers** 411
M. D. Feit, J. A. Fleck, Jr., Lawrence Livermore Laboratory

190-75 **Intracavity techniques for high reflectivity phase conjugation at 10 μm in germanium and inverted CO_2** 412
B. J. Feldman, R. A. Fisher, E. E. Bergmann, R. G. Tercovich, F. C. Sena, I. J. Bigio, Univ. of California, Los Alamos Scientific Laboratory

190-76 **Phase conjugation in the forward direction with thin Na vapor cells** 413
C. V. Heer, N. C. Griffen, Ohio State Univ.

190-74 **Effects of signal detuning on phase conjugation** 419
TaoYi Fu, Murray Sargent III, Optical Sciences Center, Univ. of Arizona

190-77 **Application of phase conjugation to CO_2 fusion lasers** 426
I. Liberman, Univ. of California, Los Alamos Scientific Laboratory

190-85 **Design and operation of a time-gated optical system for measuring the angular distribution of light emitted from laser targets** 430
L. W. Miller, H. W. Kruse, P. J. Kruse, D. E. Bartram, N. M. Hoffman, J. M. Mack, Univ. of California, Los Alamos Scientific Laboratory

190-86 **Resolution loss in microchannel plate image-intensifier tubes at high gains** 438
J. R. Parker, Ray Engelke, W. Morton, A. S. Lundy, Univ. of California, Los Alamos Scientific Laboratory

190-87 **Fast solid-state camera** 445
Joseph R. Parker, Arvid S. Lundy, Alphonse L. Criscuolo, Los Alamos Scientific Laboratory

190-73 **Novel Fourier transform spectrometer** 452
John Strong, Univ. of Massachusetts

190-09 **Optical design and performance of a dual-grating, direct-reading spectrograph for spectrochemical analyses** 455
David W. Steinhaus, John V. Kline, Thomas M. Bieniewski, Grove S. Dow, Charles T. Apel, Los Alamos Scientific Laboratory

190-81 **Remote infrared imagery of shuttle during entry** 461
C. J. Chocol, Martin Marietta Aerospace, Denver Division

190-70 **Static measurements of light-scattering by biological cells** 467
D. E. Burger, J. H. Jett, P. F. Mullaney, Los Alamos Scientific Laboratory

190-16 **Properties of an x-ray catoptrical system** 471
James F. McGee, Saint Louis University

190-68 **Optical measurements in high-pressure diamond-anvil cells** 476
D. H. Liebenberg, R. L. Mills, J. C. Bronson, Los Alamos Scientific Laboratory

190-69 **Optical interference measurements for equation-of-state measurements in high pressure gases** 480
D. H. Liebenberg, Los Alamos Scientific Laboratory

SECTION V. INVITED ARTICLES 483

190-97 **Role of the retinex** 484
Edwin H. Land, Polaroid Corporation

190-96 **Application of optical communication technology to optical information processing** 485
J. W. Goodman, A. R. Dias, L. M. Woody, J. Erickson, Stanford University

190-93 **Optical design using new computer technology** 497
Douglas C. Sinclair, The Institute of Optics, Univ. of Rochester

190-94 **Optical design considerations in CO_2 laser fusion systems** 498
T. F. Stratton, Univ. of California, Los Alamos Scientific Laboratory

190-95 **High-power gas lasers, spectroscopy, and other applications** 499
C. K. N. Patel, Bell Telephone Laboratories

190-98 **Future developments in laser technology and their applications** 500
Keith Boyer, Univ. of California, Los Alamos Scientific Laboratory

190-99 **Solid state lasers at Livermore** 505
J. F. Holzrichter, Lawrence Livermore Laboratory

190-100 **Deeper look at total internal reflection and some of its implications** 506
A. I. Mahan, Johns Hopkins University

190-101 **Recent investigations of interferometry and applications to optical testing** 507
James C. Wyant, Optical Sciences Center, Univ. of Arizona

190-102 **Altitude effects of the atmospheric modulation transfer function** 512
D. L. Walters, White Sands Missile Range

190-92 **Pulse propagation and energy extraction in short pulse CO_2 lasers** 516
G. T. Schappert, Univ. of California, Los Alamos Scientific Laboratory

SUBJECT INDEX

(ASTM), optical standards and the American Society for Testing and Materials, 127
Aberration sensor, interference problems in a coherent, 37
Aberrations, lens design that simultaneously optimizes image spots, optical path difference (OPD), diffraction modulation transfer function (DMTF), and Seidel, 2
Absorber for the Helios CO_2 laser system, optimization of a multicomponent gaseous saturable, 178
Acquisition/analysis system for infrared spectrophotometry, digital data, 30
Adaptive optics element for wavefront error correction in the Gemini CO_2 laser fusion system, use of, 251
Alignment, new position-sensitive detector for pulsed or CW laser beam, 344
Alignment system, Antares beam, 207
Alignment system, Helios CO_2 fusion laser, 186
Alignment tool for carbon dioxide laser fusion systems, infrared Smartt interferometer as an, 243
Altitude effects of the atmospheric modulation transfer function, 512
American Society for Testing and Materials (ASTM), optical standards and the, 127
Amplification at 16 micrometers, parametric, 280
Amplifier optical system, Antares power, 225
Amplifiers, multipulse energy extraction in CO_2 laser, 340
Analyses, optical design and performance of a dual-grating, direct-reading spectrograph for spectrochemical, 455
Analysis of carbon dioxide laser fusion systems using interferometry and fast Fourier transform techniques, optical design and, 158
Analysis of optical diffraction in Antares, LOTS, 232
Analysis of the paraxial equations of optics, dimensional, 21
Angular distribution of light emitted from laser targets, design and operation of a time-gated optical system for measuring the, 430
Antares beam alignment system, 207
Antares CO_2 laser system, Polytran® NaCl windows for LASL, 106
Antares laser system, mirror quality required by the, 218
Antares, LOTS analysis of optical diffraction in, 232
Antares power amplifier optical system, 225
Aplanatic waxicons, 10
Application of optical communication technology to optical information processing, 485
Application of phase conjugation to CO_2 fusion lasers, 426
Applications of the laser optical train simulation (LOTS) computer code to laser fusion systems and other physical optics problems, 238
Arbitrary optical fibers, pulse propagation and dispersion in, 411
Arrays, multi-anode microchannel, 360
Aspherics, 10.6 micrometer interferometric testing of infrared optical components and, 99
Atmospheric modulation transfer function, altitude effects of the, 512
Avalanche discharge laser, unstable resonator studies for a 1-joule per pulse KrF, 311

Bandwidth measured in concatenated fiber optic cables, modeling the cumulative, 408
Beam alignment, new position-sensitive detector for pulsed or CW laser, 344
Beam alignment system, Antares, 207
Beam diagnostics, design of Helios, 197
Beam expander—a new design, laser, 15
Beam simultaneity in multi-terawatt CO_2 laser fusion systems, 172
Biological cells, static measurements of light-scattering by, 467
Brewster's angle, sychronous detection technique for determining, 67
Broadband 90° phase change, multilayer high reflective coating designs achieving, 81
Broadly tunable picosecond infrared (IR) source, 286

CF_4 laser, spectroscopy of the, 262
CF_4 laser system, efficient optically pumped, 270
CF_4 molecule, optical pumping of the $\nu_3 + \nu_4$ band of the, 272
CO_2, calculation of small signal gain coefficients in, 327
CO_2 enriched in ^{18}O and ^{17}O, diode laser spectroscopy of Q branches at 662-666 cm^{-1} of, 275
CO_2 fusion laser alignment system, Helios, 186
CO_2 fusion lasers, application of phase conjugation to, 426
CO_2, intracavity techniques for high reflectivity phase conjugation at 10 μm in germanium and inverted, 412
CO_2 laser amplifiers, multipulse energy extraction in, 340
CO_2 laser fusion system, novel deformable mirror design for possible wavefront correction in, 258
CO_2 laser fusion system, use of adaptive optics element for wavefront error correction in the Gemini, 251
CO_2 laser fusion systems, beam simultaneity in multi-terawatt, 172
CO_2 laser fusion systems, optical design considerations in, 498
CO_2 laser pulse measurements, pyroelectric detectors for subnanosecond, 347
CO_2 laser system, optimization of a multicomponent gaseous saturable absorber for the Helios, 178
CO_2 laser system, Polytran® NaCl windows for LASL Antares, 106
CO_2 lasers, pulse propagation and energy extraction in short pulse, 516
CO_2 oscillator, high pressure reinjection, 332
CO_2 pulses by free-induction decay in $KCl:KReO_4$, generation of ultrashort, 332
CW laser beam alignment, new position-sensitive detector for pulsed or, 344
Cables, modeling the cumulative bandwidth measured in concatenated fiber optic, 408
Calculation of small signal gain coefficients in CO_2, 327
Camera, fast solid-state, 445
Carbon dioxide laser fusion system, optical performance of the Gemini, 165
Carbon dioxide laser fusion systems, infrared Smartt interferometer as an alignment tool for, 243
Carbon dioxide laser fusion systems using interferometry and fast Fourier transform techniques, optical design and analysis of, 158
Catoptrical system, properties of an x-ray, 471
Cells, optical measurements in high-pressure diamond-anvil, 476
Cells, static measurements of light-scattering by biological, 467
Characteristics of diffused junction silicon photodiodes, performance, 355
Characterization of low-loss multimode optical fibers for nuclear diagnostics, 401
Coating designs achieving broadband 90° phase change, multilayer high reflective, 81
Coatings without polishing, removal of optical, 73

Code to laser fusion systems and other physical optics problems, applications of the laser optical train simulation (LOTS) computer, 238
Coherent aberration sensor, interference problems in a, 37
Communication technology to optical information processing, application of optical, 485
Compensation in multilayer dichroic mirrors for the 16 μm spectral region, mechanical stress, 89
Components and aspherics, 10.6 micrometer interferometric testing of infrared optical, 99
Computer code to laser fusion systems and other physical optics problems, applications of the laser optical train simulation (LOTS), 238
Computer technology, optical design using new, 497
Concatenated fiber optic cables, modeling the cumulative bandwidth measured in, 408
Conjugation to CO_2 fusion lasers, application of phase, 426
Conjugation, effects of signal detuning on phase, 419
Conjugation in the forward direction with thin Na vapor cells, phase, 413
Conjugation at 10 μm in germanium and inverted CO_2, intracavity techniques for high reflectivity phase, 412
Continuous polisher, polishing large NaCl windows on a, 120
Controlled fusion experiment, use of fiber optics to eliminate ground loops and maintain shielding integrity on a, 396
Correction in CO_2 laser fusion system, novel deformable mirror design for possible wavefront, 258
Correction in the Gemini CO_2 laser fusion system, use of adaptive optics element for wavefront error, 251
Cumulative bandwidth measured in concatenated fiber optic cables, modeling the, 408
Czochralski-grown NaCl, large laser windows from, 112

(DMTF), and Seidel aberrations, lens design that simultaneously optimizes image spots, optical path difference (OPD), diffraction modulation transfer function, 2
Dark-field-like surface inspection technique using total internal reflection, improved, 44
Data acquisition/analysis system for infrared spectrophotometry, digital, 30
Decay in KCl:$KReO_4$, generation of ultrashort CO_2 pulses by free-induction, 332
Deeper look at total internal reflection and some of its implications, 506
Deformable mirror design for possible wavefront correction in CO_2 laser fusion system, novel, 258
Design and analysis of carbon dioxide laser fusion systems using interferometry and fast Fourier transform techniques, optical, 158
Design considerations in CO_2 laser fusion systems, optical, 498
Design of Helios beam diagnostics, 197
Design and operation of a time-gated optical system for measuring the angular distribution of light emitted from laser targets, 430
Design and performance of a dual-grating, direct-reading spectrograph for spectrochemical analyses, optical, 455
Design for possible wavefront correction in CO_2 laser fusion system, novel deformable mirror, 258
Design using new computer technology, optical, 497
Designing holographic optical elements, 5
Detection technique for determining Brewster's angle, synchronous, 67
Detector developments at ITT, subnanosecond, 369
Detector for pulsed or CW laser beam alignment, new position-sensitive, 344
Detectors for subnanosecond CO_2 laser pulse measurements, pyroelectric, 347
Detuning on phase conjugation, effects of signal, 419
Developments in laser technology and their applications, future, 500
Diagnostic system for observation of laser-produced shock waves, optical, 380
Diagnostics, characterization of low-loss multimode optical fibers for nuclear, 401
Diagnostics, design of Helios beam, 197
Diagnostics, fiber optic applications in plasma, 388
Diamond-anvil cells, optical measurements in high-pressure, 476
Diamond-turned mirror performance before and after polishing, single-point, 103
Dichroic mirrors for the 16 μm spectral region, mechanical stress compensation in multilayer, 89
Difference (OPD), diffraction modulation transfer function (DMTF), and Seidel aberrations, lens design that simultaneously optimizes image spots, optical path, 2
Diffraction in Antares, LOTS analysis of optical, 232
Diffraction modulation transfer function (DMTF), and Seidel aberrations, lens design that simultaneously optimizes image spots, optical path difference (OPD), 2
Diffraction theory, scatterplate interferometry: a, 52
Diffused junction silicon photodiodes, performance characteristics of, 355
Digital data acquisition/analysis system for infrared spectrophotometry, 30
Dimensional analysis of the paraxial equations of optics, 21
Diode laser spectroscopy of Q branches at 662–666 cm^{-1} of CO_2 enriched in ^{18}O and ^{17}O, 275
Direction with thin Na vapor cells, phase conjugation in the forward, 413
Direct-reading spectrograph for spectrochemical analyses, optical design and performance of a dual-grating, 455
Discharge laser, unstable resonator studies for a 1-joule per pulse KrF avalanche, 311
Dispersion in arbitrary optical fibers, pulse propagation and, 411
Distribution of light emitted from laser targets, design and operation of a time-gated optical system for measuring the angular, 430
Dual-grating, direct-reading spectrograph for spectrochemical analyses, optical design and performance of a, 455

Effects of signal detuning on phase conjugation, 419
Efficient optically pumped CF_4 laser system, 270
Efficient translation of infrared laser wavelengths by microwave electro-optic modulation, highly, 316
Electro-optic modulation, highly efficient translation of infrared laser wavelengths by microwave, 316
Element for wavefront error correction in the Gemini CO_2 laser fusion system, use of adaptive optics, 251
Elements, designing holographic optical, 5
Elements using phase measuring interferometric tests, fabrication of precision optical, 71
Energy extraction in CO_2 laser amplifiers, multipulse, 340
Energy extraction in short pulse CO_2 lasers, pulse propagation and, 516
Energy flow and plasma motion in laser-produced plasmas, optical measurements of lateral, 259
Equation-of-state measurements in high pressure gases, optical interference measurements for, 480
Equations of optics, dimensional analysis of the paraxial, 21
Error correction in the Gemini CO_2 laser fusion system, use of adaptive optics element for wavefront, 251
Expander—a new design, laser beam, 15
Extraction in CO_2 laser amplifiers, multipulse energy, 340
Extraction in short pulse CO_2 lasers, pulse propagation and energy, 516

Fabrication of precision optical elements using phase measuring interferometric tests, 71
Fast Fourier transform techniques, optical design and analysis of carbon dioxide laser fusion systems using interferometry and, 158
Fast solid-state camera, 445
Fiber optic applications in plasma diagnostics, 388
Fiber optic cables, modeling the cumulative bandwidth measured in concatenated, 408
Fiber optics to eliminate ground loops and maintain shielding integrity on a controlled fusion experiment, use of, 396

Fibers for nuclear diagnostics, characterization of low-loss multimode optical, 401
Fibers, pulse propagation and dispersion in arbitrary optical, 411
Figuring and evaluation of 18" NaCl windows, optical, 116
Flow and plasma motion in laser-produced plasmas, optical measurements of lateral energy, 259
Forward direction with thin Na vapor cells, phase conjugation in the, 413
Fourier transform spectrometer, novel, 452
Free-induction decay in KCl:$KReO_4$, generation of ultrashort CO_2 pulses by, 332
Fusion experiment, use of fiber optics to eliminate ground loops and maintain shielding integrity on a controlled, 396
Fusion laser alignment system, Helios CO_2, 186
Fusion lasers, application of phase conjugation to CO_2, 426
Fusion system, novel deformable mirror design for possible wavefront correction in CO_2 laser, 258
Fusion system, optical performance of the Gemini carbon dioxide laser, 165
Fusion system, use of adaptive optics element for wavefront error correction in the Gemini CO_2 laser, 251
Fusion systems, beam simultaneity in multi-terawatt CO_2 laser, 172
Fusion systems, infrared Smartt interferometer as an alignment tool for carbon dioxide laser, 243
Fusion systems, optical design considerations in CO_2 laser, 498
Fusion systems and other physical optics problems, applications of the laser optical train simulation (LOTS) computer code to laser, 238
Fusion systems using interferometry and fast Fourier transform techniques, optical design and analysis of carbon dioxide laser, 158
Future developments in laser technology and their applications, 500

Gain coefficients in CO_2, calculation of small signal, 327
Gas lasers, spectroscopy, and other applications, high-power, 499
Gaseous saturable absorber for the Helios CO_2 laser system, optimization of a multicomponent, 178
Gases, optical interference measurements for equation-of-state measurements in high pressure, 480
Gated optical system for measuring the angular distribution of light emitted from laser targets, design and operation of a time-, 430
Gemini carbon dioxide laser fusion system, optical performance of the, 165
Gemini CO_2 laser fusion system, use of adaptive optics element for wavefront error correction in the, 251
Generation of ultrashort CO_2 pulses by free-induction decay in KCl:$KReO_4$, 332
Germanium and inverted CO_2, intracavity techniques for high reflectivity phase conjugation at 10 μm in, 412
Ground loops and maintain shielding integrity on a controlled fusion experiment, use of fiber optics to eliminate, 396

Halide oscillators, mini-lasers for high-repetiton-rate rare gas, 305
Helios beam diagnostics, design of, 197
Helios CO_2 fusion laser alignment system, 186
Helios CO_2 laser system, optimization of a multicomponent gaseous saturable absorber for the, 178
Helios target positioning system, 191
High gains, resolution loss in microchannel plate image-intensifier tubes at, 438
High-power gas lasers, spectroscopy, and other applications, 499
High-pressure diamond-anvil cells, optical measurements in, 476
High pressure gases, optical interference measurements for equation-of-state measurements in, 480
High pressure reinjection CO_2 oscillator, 338
High reflective coating designs achieving broadband 90° phase change, multilayer, 81
High reflectivity phase conjugation at 10 μm in germanium and inverted CO_2, intracavity techniques for, 412
High-repetition-rate rare gas halide oscillators, mini-lasers for, 305
Highly efficient translation of infrared laser wavelengths by microwave electro-optic modulation, 316

Holographic optical elements, designing, 5
Ho:YLF laser, TEM_{00} mode, 297

I^3 sensor wavefront performance, 91
(IR) source, broadly tunable picosecond infrared, 286
ITT, subnanosecond detector developments at, 369
Image-intensifier tubes at high gains, resolution loss in microchannel plate, 438
Image spots, optical path difference (OPD), diffraction modulation transfer function (DMTF), and Seidel aberrations, lens design that simultaneously optimizes, 2
Imagery of shuttle during entry, remote infrared, 461
Improved dark-field-like surface inspection technique using total internal reflection, 44
Information processing, application of optical communication technology to optical, 485
Infrared imagery of shuttle during entry, remote, 461
Infrared (IR) source, broadly tunable picosecond, 286
Infrared laser wavelengths by microwave electro-optic modulation, highly efficient translation of, 316
Infrared optical components and aspherics, 10.6 micrometer interferometric testing of, 99
Infrared Smartt interferometer as an alignment tool for carbon dioxide laser fusion systems, 243
Infrared spectrophotometry, digital data acquisition/analysis system for, 30
Inspection technique using total internal reflection, improved dark-field-like surface, 44
Integrity on a controlled fusion experiment, use of fiber optics to eliminate ground loops and maintain shielding, 396
Interference measurements for equation-of-state measurements in high pressure gases, optical, 480
Interference problems in a coherent aberration sensor, 37
Interferometer as an alignment tool for carbon dioxide laser fusion systems, infrared Smartt, 243
Interferometric testing of infrared optical components and aspherics, 10.6 micrometer, 99
Interferometric tests, fabrication of precision optical elements using phase measuring, 71
Interferometry and applications to optical testing, recent investigations of, 507
Interferometry: a diffraction theory, scatterplate, 52
Interferometry and fast Fourier transform techniques, optical design and analysis of carbon dioxide laser fusion systems using, 158
Internal reflection, improved dark-field-like surface inspection technique using total, 44
Internal reflection and some of its implications, deeper look at total, 506
Intracavity techniques for high reflectivity phase conjugation at 10 μm in germanium and inverted CO_2, 412
Introduction to the Proceedings of the Los Alamos Conference on Optics '79, x
Inverted CO_2, intracavity techniques for high reflectivity phase conjugation at 10 μm in germanium and, 412
Investigations of interferometry and applications to optical testing, recent, 507
Ion in KCl, nonlinear optical properties of the perrhenate, 293

Junction silicon photodiodes, performance characteristics of diffused, 355

KCl, nonlinear optical properties of the perrhenate ion in, 293
KCl:$KReO_4$, generation of ultrashort CO_2 pulses by free-induction decay in, 332
KrF avalanche discharge laser, unstable resonator studies for a 1-joule per pulse, 311

LOTS analysis of optical diffraction in Antares, 232

(LOTS) computer code to laser fusion systems and other physical optics problems, applications of the laser optical train simulation, 238
Large laser windows from Czochralski-grown NaCl, 112
Large NaCl windows on a continuous polisher, polishing, 120
Large plane-grating spectrograph, vacuum predisperser for a, 24
Laser alignment system, Helios CO_2 fusion, 186
Laser amplifiers, multipulse energy extraction in CO_2, 340
Laser beam alignment, new position-sensitive detector for pulsed or CW, 344
Laser beam expander—a new design, 15
Laser fusion system, novel deformable mirror design for possible wavefront correction in CO_2, 258
Laser fusion system, optical performance of the Gemini carbon dioxide, 165
Laser fusion system, use of adaptive optics element for wavefront error correction in the Gemini CO_2, 251
Laser fusion systems, beam simultaneity in multi-terawatt CO_2, 172
Laser fusion systems, infrared Smartt interferometer as an alignment tool for carbon dioxide, 243
Laser fusion systems, optical design considerations in CO_2, 498
Laser fusion systems and other physical optics problems, applications of the laser optical train simulation (LOTS) computer code to, 238
Laser fusion systems using interferometry and fast Fourier transform techniques, optical design and analysis of carbon dioxide, 158
Laser optical train simulation (LOTS) computer code to laser fusion systems and other physical optics problems, applications of the, 238
Laser-produced plasmas, optical measurements of lateral energy flow and plasma motion in, 259
Laser-produced shock waves, optical diagnostic system for observation of, 380
Laser pulse measurements, pyroelectric detectors for subnanosecond CO_2, 347
Laser pulse shaping on multiple rotational lines, 322
Laser, spectroscopy of the CF_4, 262
Laser spectroscopy of Q branches at 662-666 cm^{-1} of CO_2 enriched in ^{18}O and ^{17}O, diode, 275
Laser system, efficient optically pumped CF_4, 270
Laser system, mirror quality required by the Antares, 218
Laser system, optimization of a multicomponent gaseous saturable absorber for the Helios CO_2, 178
Laser system, Polytran® NaCl windows for LASL Antares CO_2, 106
Laser targets, design and operation of a time-gated optical system for measuring the angular distribution of light emitted from, 430
Laser technology and their applications, future developments in, 500
Laser, TEM_{00} mode Ho:YLF, 297
Laser, unstable resonator studies for a 1-joule per pulse KrF avalanche discharge, 311
Laser wavelengths by microwave electro-optic modulation, highly efficient translation of infrared, 316
Laser windows from Czochralski-grown NaCl, large, 112
Lasers, application of phase conjugation to CO_2 fusion, 426
Lasers for high-repetition-rate rare gas halide oscillators, mini-, 305
Lasers at Livermore, solid state, 505
Lasers, pulse propagation and energy extraction in short pulse CO_2, 516
Lasers, spectroscopy, and other applications, high-power gas, 499
Lateral energy flow and plasma motion in laser-produced plasmas, optical measurements of, 259
Lens design that simultaneously optimizes image spots, optical path difference (OPD), diffraction modulation transfer function (DMTF), and Seidel aberrations, 2
Light emitted from laser targets, design and operation of a time-gated optical system for measuring the angular distribution of, 430
Light measurements of optical surfaces, scattered-, 58
Light-scattering by biological cells, static measurements of, 467
Lines, laser pulse shaping on multiple rotational, 322
Livermore, solid state lasers at, 505
Los Alamos Conference on Optics '79, introduction to the Proceedings of the, x
Low-loss multimode optical fibers for nuclear diagnostics, characterization of, 401

Measurements for equation-of-state measurements in high pressure gases, optical interference, 480
Measurements in high-pressure diamond-anvil cells, optical 476
Measurements of lateral energy flow and plasma motion in laser-produced plasmas, optical, 259
Measurements of light-scattering by biological cells, static, 467
Measurements of optical surfaces, scattered-light, 58
Measuring the angular distribution of light emitted from laser targets, design and operation of a time-gated optical system for, 430
Mechanical stress compensation in multilayer dichroic mirrors for the 16 μm spectral region, 89
Microchannel arrays, multi-anode, 360
Microchannel plate image-intensifier tubes at high gains, resolution loss in, 438
Microwave electro-optic modulation, highly efficient translation of infrared laser wavelengths by, 316
Mini-lasers for high-repetition-rate rare gas halide oscillators, 305
Mirror design for possible wavefront correction in CO_2 laser fusion system, novel deformable, 258
Mirror performance before and after polishing, single-point diamond-turned, 103
Mirror quality required by the Antares laser system, 218
Mirrors for the 16 μm spectral region, mechanical stress compensation in multilayer dichroic, 89
Mode Ho:YLF laser, TEM_{00}, 297
Modeling the cumulative bandwidth measured in concatenated fiber optic cables, 408
Modulation, highly efficient translation of infrared laser wavelengths by microwave electro-optic, 316
Modulation transfer function, altitude effects of the atmospheric, 512
Modulation transfer function (DMTF), and Seidel aberrations, lens design that simultaneously optimizes image spots, optical path difference (OPD), diffraction, 2
Molecule, optical pumping of the $\nu_3 + \nu_4$ band of the CF_4, 272
Motion in laser-produced plasmas, optical measurements of lateral energy flow and plasma, 259
Multi-anode microchannel arrays, 360
Multicomponent gaseous saturable absorber for the Helios CO_2 laser system, optimization of a, 178
Multilayer dichroic mirrors for the 16 μm spectral region, mechanical stress compensation in, 89
Multilayer high reflective coating designs achieving broadband 90° phase change, 81
Multimode optical fibers for nuclear diagnostics, characterization of low-loss, 401
Multiple rotational lines, laser pulse shaping on, 322
Multipulse energy extraction in CO_2 laser amplifiers, 340
Multi-terawatt CO_2 laser fusion systems, beam simultaneity in, 172

Na vapor cells, phase conjugation in the forward direction with thin, 413
NaCl, large laser windows from Czochralski-grown, 112
NaCl windows on a continuous polisher, polishing large, 120
NaCl windows for LASL Antares CO_2 laser system, Polytran® , 106
NaCl windows, optical figuring and evaluation of 18", 116
New position-sensitive detector for pulsed or CW laser beam alignment, 344
90° phase change, multilayer high reflective coating designs achieving broadband, 81
Nonlinear optical properties of the perrhenate ion in KCl, 293
Novel deformable mirror design for possible wavefront correction in CO_2 laser fusion system, 258
Novel Fourier transform spectrometer, 452
Nuclear diagnostics, characterization of low-loss multimode optical fibers for, 401

(OPD), diffraction modulation transfer function (DMTF), and Seidel aberrations, lens design that simultaneously optimizes image spots, optical path difference, 2
Observation of laser-produced shock waves, optical diagnostic system for, 380
Operation of a time-gated optical system for measuring the angular distribution of light emitted from laser targets, design and, 430
Optical coatings without polishing, removal of, 73
Optical communication technology to optical information processing, application of, 485
Optical components and aspherics, 10.6 micrometer interferometric testing of infrared, 99
Optical design and analysis of carbon dioxide laser fusion systems using interferometry and fast Fourier transform techniques, 158
Optical design considerations in CO_2 laser fusion systems, 498
Optical design and performance of a dual-grating, direct-reading spectrograph for spectrochemical analyses, 455
Optical design using new computer technology, 497
Optical diagnostic system for observation of laser-produced shock waves, 380
Optical diffraction in Antares, LOTS analysis of, 232
Optical elements, designing holographic, 5
Optical elements using phase measuring interferometric tests, fabrication of precision, 71
Optical fibers for nuclear diagnostics, characterization of low-loss multimode, 401
Optical fibers, pulse propagation and dispersion in arbitrary, 411
Optical figuring and evaluation of 18" NaCl windows, 116
Optical interference measurements for equation-of-state measurements in high pressure gases, 480
Optical measurements in high-pressure diamond-anvil cells, 476
Optical measurements of lateral energy flow and plasma motion in laser-produced plasmas, 259
Optical path difference (OPD), diffraction modulation transfer function (DMTF), and Seidel aberrations, lens design that simultaneously optimizes image spots, 2
Optical performance of the Gemini carbon dioxide laser fusion system, 165
Optical properties of the perrhenate ion in KCl, nonlinear, 293
Optical pumping of the $\nu_3 + \nu_4$ band of the CF_4 molecule, 272
Optical standards and the American Society for Testing and Materials (ASTM), 127
Optical surfaces, scattered-light measurements of, 58
